Contractor: Granite Construction Company  
Project Manager: Rob Gregg  
Phone: (805) 964-9951

### **Project Description:**

This Project is primarily funded by Measure A and Utility User Tax funds, along with other respective Department/ Division contributions for their share of the work.

The Project is part of the annual Pavement Maintenance Program along with the Zone 6 Slurry Seal project. The intent of the Program is to maintain the City's asphalt pavement roadway infrastructure using a structured, systematic approach. The City is divided into seven pavement maintenance zones and, in general, one zone is maintained each year. This year's zone, Zone 6 (see attached map), consists of the Primary Arterial streets throughout the City.

This work consists of repairing localized defects on various roads, paving the way for the slurry seal operation which will follow this construction.

In conjunction with this Project, parking lots maintained by the following Divisions/Departments will also be included in the work:

- Leadbetter Entrance and Leadbetter Main Parking lots
- Downtown Parking Lots 8 and 10, the Cota and Carrillo Commuter Lots
- Fire Station No. 4 and Pershing Park Parking Lots

Not all streets in Zone 6 are included in this year's maintenance program. For example, Upper State Street and De La Vina Street have recently been maintained and are excluded from this zone.

The work is anticipated to start by mid July and to be completed by September 2011.
